100% COTTON CANVAS · WHY IT WINS

Natural Canvas.
Unmatched.

01 Zero Condensation — Always

Natural cotton fibers allow interior water vapor to escape through the weave — eliminating the dripping, clammy walls that plague synthetic tents. When cotton gets wet, fibers swell to form a tighter water-resistant seal while remaining fully breathable.

02 Natural Climate — No Power Needed

Thick cotton canvas insulates against cold in winter while staying remarkably cool in summer sun. A passive thermal regulation that polyester fabrics simply cannot replicate — a comfortable microclimate regardless of conditions outside.

03 5-10 Years. Not 1-2.

A well-maintained cotton canvas tent is a decade-long investment. The galvanized steel frame resists corrosion for a lifetime, and the canvas resists UV degradation far better than polyester. One Aguja outlasts three or four budget synthetic replacements.

COTTON VS. POLYESTER

Condensation	Polyester - HIGH	Aguja - ZERO
Summer Heat	Polyester - Traps	Aguja - Breathes
Winter Warmth	Polyester - Minimal	Aguja - Insulates
Lifespan	Polyester - 1-2yr	Aguja - 5-10yr

Pre-installed Stove Jack - STANDARD

High-temperature silicone stove jack comes factory-installed on every Aguja. No modifications, no upgrades. Feed a wood-burning stove pipe through it to heat the full interior in sub-zero conditions.

You don't just sleep in the Aguja — you live in it.

A PORTABLE CANVAS SANCTUARY

The Simplest Frame. The Strongest Result.

14.8 feet across. 9.8 feet tall. Multiple queen beds, furniture, a wood stove — and it still doesn't feel crowded. One center pole, one A-frame, 30 minutes to a fully standing canvas home.

100% COTTON

STOVE-READY

4-SEASON

GALVANIZED STEEL

Year-Round Basecamp

Cotton + stove jack = genuine winter use. Roll the sidewall up for open-air canopy mode in summer.

Glamping & Airbnb

The tent guests photograph. 5-10 year lifespan. Bookable all winter with a stove.

Hunting & Expedition

Steel holds in wind and snow. Cotton breathes. Stove jack means heat on demand.

DIMENSIONS & INTERIOR

A Real Room. Outdoors.

The footprint of a studio apartment. Portable. 14.8ft circular floor plan with a 9.8ft center peak — genuine living space for 4–6 people, or a luxurious glamping setup for 2–4 with full furniture and gear.

SETUP

THREE ENGINEERING SYSTEMS

Multi-Window + Mesh Ventilation

Multiple zippered windows and large zippered entry door — each backed by fine no-see-um mesh. Open all for crossventilation or seal tight. Roll the full sidewall up for open-air canopy mode in summer.

Fortress-Grade PVC Bathtub Floor

500 GSM PVC groundsheet rises fully sealed to tent walls. Riverraft grade material — pitch on mud, wet grass, or snow. Zero ground moisture, zero insects, zero drafts. Wipes clean.

Galvanized Steel Frame

Center pole and A-frame door structure in galvanized steel — corrosion-resistant for a lifetime outdoors. The simplest frame possible produces the most stable result. Stands in high winds and snow load.

INTERIOR ACCOMMODATES

- 2+ Queen Beds
- Lounge Sofa
- Dresser + Storage
- Desk + Table
- Wood Stove
- 2+ Chairs
- Full Standing Room
- All Gear + 4 People

MATERIAL, MODES & SPECIFICATION

Winter Basecamp. Summer Pavilion.

TWO SEASONAL MODES

Winter Basecamp

Stove jack pre-installed. Cotton insulates naturally. Steel holds in snow. 4-season rated year-round.

Summer Pavilion

Roll the mesh windows up for open-air canopy mode. No-see-um mesh — full airflow, zero insects.
